

Why Choose Infracore for Your Cybersecurity Needs?

Our cybersecurity audits are overseen by our CISO, a recognized cybersecurity and forensics expert. Using a process refined over 20 years, Infracore's cybersecurity audits offer unparalleled depth and analysis, and are paired with actionable insights.

Remediation projects can be handled by our team, or we can hand a roadmap back to our clients. Infracore can also conduct audits of remediated items.

**System / Network
Vulnerability
Scanning**

Don't buy a partial solution!

- Many vendors will only look at one system, or merely run automated scans with generic output.
- Effective cybersecurity audits must understand your business, your risks, your industry, and your goals.
- Infracore's comprehensive cybersecurity audit covers more areas in more depth and with better analysis and insights.

Case Studies

- Performed cybersecurity audit for an accounting firm. Worked with our client's MSP to discuss issues, and helped manage the remediation so client could feel confident in their security posture.
- Identified gaps in Information Security policies and procedures during cybersecurity audit for therapeutics firm. Resolved controls around sharing sensitive company information with third party contractors. Worked with client to create a policy around external data sharing that balanced the needs of productivity and security.
- Performed cybersecurity audit for a pre-IPO biotech company. Executed a deep analysis of their Microsoft 365 environment and recommended numerous changes to help improve their security posture, including DKIM/DMARC, spam/phishing filtering enhancements, and external sharing configurations. Resolved missing policies and procedures, data backup policies, and user onboarding/offboarding policies. Built remediation roadmap and executed remediation projects.
